

Pile Protector™

Marine Growth Preventer (MGP)

Marine growth (barnacles) may cause premature coating failures, increase wave loading and weaken structures.

Pile Protector™ is a cost effective, field proven and environmentally friendly solution to prevent and protect structures from marine growth.

Pile Protector™ is powered by natural ocean forces. The continuous sweeping motion contact by the rubber rollers against the substrate, breaks down the marine colonization process of micro-fouling thus permanently preventing the marine growth on piles or structures.

Benefits

- Fast and easy installation
- Reduces maintenance cost
- Prevents coating breakdown
- Visual inspection of splash zone
- Extends useful life of structures
- Environmentally friendly
